Nucor, which is the largest steel producer in the US, was [certified by the GSBC in January](#) to reduce carbon emissions by 2030 for its hot-rolled steel production, advancing the steelmaker's decarbonization drive to hit its net-zero target by 2050.

These four companies had reported a one-year emissions reduction of 3 million tons of carbon dioxide emissions, which is equivalent to taking 628,000 cars off the road for a year, Adler said.

"We are looking forward to growing that number as the number of certified members' targets grow," Adler said.

To date, only Newport, Arkansas-based billet, bar and rail tie producer ASA and Fort Wayne, Indiana-based SDI have achieved product-level certification from GSBC, Adler said.

"There are other companies in the pipeline, globally, for both the steps of the GSBC standard, which will be unveiled in the first quarter of 2026," Adler told Fastmarkets.

The GSBC certified eight specific hot-rolled steel products from ASA and SDI in [July](#), marking an expansion in GSBC's certification program, moving beyond company-wide emissions targets to include product-level certification under the Steel Climate Standard.

ASA earned product-level certification for one of its core offerings, a steel railroad OTM (other track material), while SDI received certification for hot-rolled steel products from each of the company's seven steel mills.

"Each product was independently verified to meet the rigorous emissions intensity thresholds set by the Steel Climate Standard," according to a GSBC press release, which added that the independent verification of ASA's and SDI's products was conducted by one of the GSBC verification bodies KERAMIDA, which is a global environmental health safety and sustainability services company.

SDI received GSBC's certification for the following hot-rolled products:

1. Steel sheet substrate from its Butler Flat Roll Division in Butler, Indiana

2. Merchant bar quality (MBQ) steel and specialty bar quality (SBQ) steel from its Engineered Bar Products Division in Pittsboro, Indiana
3. Semi-finished steel billets, steel reinforcing bar (rebar), structural and merchant bar, and rail from its Structural and Rail Division in Columbia City, Indiana
4. Semi-finished steel billets, rebar, steel structural and merchant bar from its Roanoke Bar Division in Roanoke, Virginia
5. Steel sheet substrate from its Columbus Flat Roll Division in Columbus, Mississippi
6. Steel sheet substrate from its Southwest-Sinton Flat Roll Division in Sinton, Texas
7. Specialty shapes, rail and rail products, steel structural and merchant bar, and semi-finished steel billets from its Steel of West Virginia facility in Huntington, West Virginia.

SDI expanded its range of lower-embodied carbon steel product offerings in [October](#), launching two products BIOEDGE and EDGE, that will be made exclusively using electric-arc furnace (EAF) technology.

SDI has a stated goal to be carbon neutral by 2050 at its EAF steel mill operations.

Separately, ResponsibleSteel, which is a third-party provider of sustainability standards and certification, certified integrated steel producer US Steel's mini mill subsidiary Big River Steel with a "level 1" honor in [September 2024](#), which was lauded as a "gold standard" for the steelmaking industry by US Steel's chief executive officer David Burritt.

Big River Steel in Osceola, Arkansas, had received ResponsibleSteel's first-ever site certification in North America in [2022](#).

Fastmarkets' weekly [green steel domestic, differential to US HRC, fob mill](#) was flat at \$0 per short ton on December 10, unchanged since the differential was launched on May 22, 2024.

Fastmarkets' carbon threshold is 0.7 tCO2e per 1 tonne of steel. Renewable energy credits and mass balancing can be used for carbon calculation, but carbon-offset credits are explicitly disallowed.

## Steel plate news

### US domestic plate prices remain steady amid improved demand, trading

By Melissa VanDervort - Tuesday 16 December

Plate prices in the US were unchanged on Tuesday December 16, with sources describing a stable market with a modest pickup in demand and spot activity in the final month of the year.

Fastmarkets' weekly assessment for **steel cut-to-length plate carbon grade, fob mill US** was \$51 per hundredweight (\$1,020 per short ton) on Tuesday, steady since going up by 2% from \$50 per cwt on November 25.

Inputs were collected in the range of \$47.50-53.00 per cwt, representing offers and general assessments of the spot market.

The domestic plate market has experienced a moderate rebound in demand and spot trading in the last month of 2025, according to market participants.

"December has been a stronger-than-usual booking month for us," a

distributor said. "It seems like inventory in the supply chain is lower than usual going into Q1 [of 2026]. I would expect mills to have some pricing power in Q1 if this pattern continues."

A second distributor shared a similar view, saying, "It does seem [that] there is a little more activity [in the plate market]. Not as much stock quotes, but lots of processing quotes, projects and contracts."

Sources expect further plate price increases by early in the first quarter of 2026, citing improving demand, steadily rising hot-rolled coil prices and lack of plate imports coming into the US.

Nucor last announced a plate price hike of \$30 per ton (\$1.50 per cwt) in a letter to customers on **November 24**.

"I expect to see another increase by [the] end of the year or early January [of 2026]," the second distributor said. "Imports are low and not much [is] coming in. Domestic plate mills look to be in the driver's seat soon."

"I do think pricing will increase slightly, as hot-rolled coil [prices] are moving up quickly and plate usually follows at some point," a third distributor said.

Lead times were at four to six weeks, according to sources.

and market conditions may not fully support the higher prices.

Despite this, the odds for a price hike success favors the mills, a wire producer said.

"Their competition is under tariffs for the most part, the mills are busy, and the ones that can make rebar for the hot AI data center build-outs will likely devote more of their production time and assets to rebar versus wire rod, which will keep the [wire rod] supply throttled and the prices high," the wire producer said.

"Availability in December was a little tighter than November because of contract buyers trying to bring in extra material prior to their costs going up in January. I would anticipate January demand to soften a little bit," a Midwestern distributor said.

"My customer demand has been healthy, extremely soft in some markets and steady in others — overall a little softer than anticipated, but healthy," the Midwestern distributor added.

A buyer said import prices are not low enough, compared with domestics, to attract buyers.

A consumer said he was "surprised" that mills raised prices: "We kind of feel like there's more pressure on the downside."

Traders reported a decline in import prices.

"The primary driver for the rod market continues to be AI data center construction, and the resulting infrastructure construction for those centers," a mill source said. "The rest of the market for rod remains flat, with little demand improvement."

The mill source said that import volumes have fallen recently after surging the first nine months of the year, with an expectation they will remain down through most of the first quarter of 2026.

When mill outages scheduled for first quarter end, the mill source said, the domestic wire rod industry should be near full capacity in the second quarter.

With a surge of imports expected starting in April, "demand will need to improve to consume all the rod that will be available then," the mill source said.

"We are also expecting scrap to increase again in January by \$20-30 per ton, and [wire rod] prices for February to increase again by at least this amount as a result," the mill source said.

#### Alternative rod

Fastmarkets' monthly price assessment for [steel wire rod \(high carbon\), fob mill US](#) was \$66 per cwt on Tuesday, unchanged since August 19.

And Fastmarkets' monthly price assessment for [steel wire rod cold-heading quality, ddp](#) was \$64 per cwt on Tuesday, unchanged since June 17.
